

NGUYEN NGOC LINH

linhnguyenngoc.nnl@gmail.com | 094 732 14 45 | linkedin.com/nnl-linh-nguyen | github.com/cadicedit2k5/

Profile

Information Technology student with hands-on experience developing backend and full-stack applications. Built REST APIs, payment integrations, role-based access control, and asynchronous workflows using Java, Python, Spring, Django, Flask, Redis, and Celery. Seeking a Software Engineering Internship to contribute to real-world product development.

Education

HCMC Open University, Bachelor of Science in Information Technology Oct 2023 – Expected 2027
• GPA: 3.61/4.0

Achievements

First Prize – University-level Software Solutions Competition, Competitive Programming Category
Samsung Innovation Campus – Artificial Intelligence, Certificate of Excellent Completion, Aug 2024

Projects

EverCare - Clinic Management Platform - Team Project github.com/EverCare
Java 17, Spring MVC, Spring Security, Hibernate, MySQL, ReactJs, Cloudinary

- Developed full-stack modules for doctor and schedule administration, patient profiles, appointment booking, notifications, medical records, prescriptions, and receptionist workflows.
- Implemented invoice, payment, and refund workflows through VNPay, MoMo, and ZaloPay, including REST APIs, transaction handling, and patient/receptionist payment interfaces.
- Built reports for patient demographics, service usage, disease distribution, and revenue; added booking constraints, automatic no-show transitions, and refactored repository and service queries to remove duplicated logic.

OCi - Online Cinema Booking System - Team Project github.com/OCi
Python (Flask), MySQL, Redis, Celery, Cloudinary, Google Drive API

- Engineered end-to-end ticket booking and operational check-in workflows for an online cinema platform.
- Built Celery and Redis background jobs for showtime closure and stale asset cleanup; prevented concurrent seat allocation using Redis TTL locks.
- Integrated MoMo with the Strategy Pattern, enforced data-ownership checks against IDOR, and implemented Google Drive API v3 storage with OAuth 2.0 offline access.

DineRes - Online Restaurant Reservation Booking App - Team Project github.com/DineRes
Python (Django, DRF), React Native, Firebase Realtime Database, Cloudinary

- Developed REST APIs for food ordering and e-payment, integrating MoMo and ZaloPay through Deep Links, Webhooks/IPN, and the Strategy Pattern.
- Implemented role-based access control with Django Custom Permissions and ContentTypes; built 1-to-1 live chat with Firebase and media uploads with Cloudinary.

Technical Skills

Languages: Java, Python, JavaScript
Backend: Spring MVC, Spring Security, Django REST Framework, Flask, Hibernate, Celery
Frontend: React, React Native, HTML, CSS, Bootstrap
Databases & Data: MySQL, SQL Server, Redis, Firebase
Tools: Git, GitHub, Vite, Axios, Cloudinary
